

BRITISH VETERINARY ASSOCIATION/KENNEL CLUB HIP DYSPLASIA SCHEME
Breed Specific Statistics – Data calculated to 01/11/11

Hip Scoring should be considered along with other criteria as part of a responsible breeding programme, and, ideally, breeders should choose breeding stock with hip scores WELL BELOW the Breed Mean Score (BMS) and ideally below the Median for their breed. For further advice see www.bva.co.uk/chs

Breed	No	Range	BMS	5yr Mean	Median	Breed	No	Range	BMS	5yr Mean	Median
A: Breeds with 1000 or more scored (31)						C: Breeds with 100 to 499 scored (29)

The Breed Mean Score (BMS) represents a global mean of the scores of all dogs of that breed that have been through the Hip Dysplasia Scheme up until 31st October 2011. The Median Score has been calculated from data recorded on the Kennel Club's electronic registration database, up until 31st October 2011. The 5-year mean is the mean of all hip scores recorded on the Kennel Club's registration database for the recent 5 year period.

* Data for these breeds has been calculated from the Canine Health Scheme database at the British Veterinary Association.
